

e-one Wireless Presentation System

WPS is a wireless presentation system that connects Notebooks / PCs to any type of projectors for displaying high quality presentations.

Plug & Show

WPS adopts Plug-and-Show technology which is a revolutionary solution to greatly improve the usability and compatibility of wireless presentation applications!

Windows Vista Compatible

WPS is compatible to all kinds of Operation System, including Windows Vista/XP/2K, Win CE 4.0 above, and Mac OS 10.4 above.

Performance

WPS has the ability to deliver real time animation screens for XGA & WXGA resolutions in 32-bit color depth. It also provides friendly web-based administrating UI for easy configuration and wireless security setups.

Security

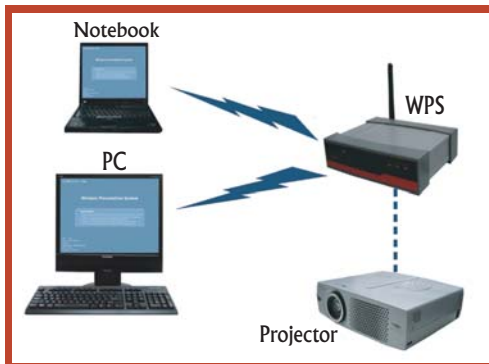

Support Login code to protect other users from accessing presentation contents. During presentation, screen images can also be protected by WEP 64/128 encryption.

Feature Highlights

- * Wireless presentation without cable swapping.
- * Compatible to all projectors with standard VGA connectors.
- * One-click to switch presenter's display, easy to use.
- * Real time display of PowerPoint presentations, images and applications.
- * Supports SVGA & XGA & WXGA display resolutions with 16/32-bit color.
- * No installation CD required, software is directly downloaded from the device.
- * Session security login and wireless WEP key to protect your presentation materials.
- * Conference Control function allows the host moderates a meeting.
- * Friendly web-based user interface and easy configuration.
- * Support Fix-IP & DHCP, Access Point & Infrastructure modes.

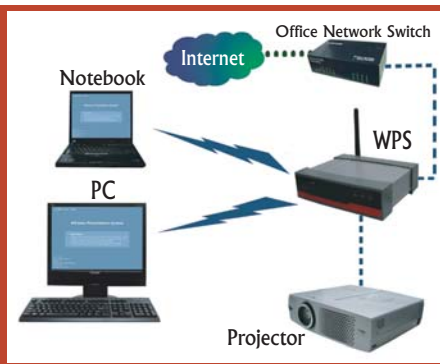

Three Operation Modes

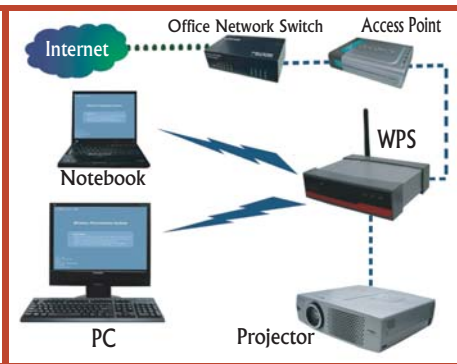

Independent Mode:

The easiest way to get the presentation gateway up and running! This mode will not connect to the office network. Notebook PCs can only link to the WPS through WLAN, and clients' IPs will be provided automatically.

Hybrid Mode:

This mode allows connecting to existing office network through LAN port so that Internet access is possible! IPs of client PCs are assigned through enterprise's DHCP server. The WPS IP need to be entered manually.

WLAN Infrastructure Mode:

This mode is purely "wireless", and still allows for accessing to the office network and thus, internet is enabled.

Application

Meeting Room, Conference Room, Research Group, Business Presentation, Lecture Hall, Products Training, Deployment, Corporate Communications, Seminar, Sales Training, Sales Calls, Product Announcement, Partner Meetings.
